

65 hours power reserve

Overview

Power Reserve refers to the running time of a fully wound mechanical watch (manual-wind or automatic). For example, if you fully wind your watch and place it on your dresser, how long before it stops running and needs to be wound again - that is the power reserve. Lately, it seems that the offered length of power reserves has become a hot-button topic in watch-related discourse - but what do you need all those hours for?

Are ~38 hours really not enough, especially in a casual or everyday sports watch?

I never give total power reserve that much of a concern. This can be affected by the size of the mainspring or the frequency of its balance wheel.
