

Analysis of the social benefits of new solar containers

Overview

This paper presents the framework for foundational research of the multiple facets of culture, social equity, ecology, policy, technology and sustainable business to create a movement that repurposes high-value equipment away from waste streams and towards a more equitable society. A mobile solar container is simply a portable, self-contained solar power system built inside a standard shipping container. By harnessing the power of the sun, we can address some of the most pressing social challenges. Photovoltaic modules, inverters and mounting hardware are getting deinstalled as systems age, owners seek to upgrade to more efficient use of rooftop space, buildings undergo major remodeling and other factors. These versatile structures not only provide shelter but also incorporate renewable energy technologies, making them a cornerstone for sustainable living solutions.
