

Automatic movement with long power storage time

Overview

Most automatic watches last between 36 and 48 hours on a full wind, though modern advancements have pushed this to 70 hours or more in some models. The power reserve of an automatic watch refers to the amount of time it will continue to operate once fully wound and then left untouched. All mechanical watches, whether they are self-winding (automatic) or manual-winding mechanisms are powered by a main spring that, when. With an astonishing 65 days of power, Vacheron Constantin currently holds the record for the watch with the longest power reserve in the world. For example, if you fully wind your watch and place it on your dresser, how long before it stops running and needs to be wound again - that is the power reserve.
