

# Can ferrovanadium be used for solar container

## Overview

---

One of the primary ways in which vanadium is used in solar battery storage is through vanadium redox flow batteries (VRFBs). These batteries use vanadium-based electrolytes to store and release energy, making them an efficient and sustainable solution for solar . Ferrovandium can be used as an elemental additive in smelting vanadium steel and alloy cast iron. Rhovan, a Glencore Ferroalloys managed vanadium mining and processing facility in South Africa, has commenced construction of a 25-megawatt solar photovoltaic plant that is expected to supply approximately 30% of the operations' annual energy demand. These issues rarely show up on a COA, but they directly affect steelmaking results.
