

Can refrigerants store heat

Overview

Refrigerants absorb heat at a low temperature and low pressure and transfer heat at a higher temperature and a higher pressure. When it comes to managing HVAC systems, understanding how to store refrigerant safely is not just essential; it's a regulatory requirement. According to EPA's regulations, failure to comply can result in fines up to \$37,500 per day. Since the air is warmer than the refrigerant, it loses some of its heat to the refrigerant.
