

# Can solar container pcs be used in cascade

Application scenarios of energy storage battery products

## Overview

---

Energy storage systems, such as batteries, pumped hydro, and flywheels, can be used to store energy generated from various sources, including renewables like wind and solar. However, the effectiveness of these systems can be greatly enhanced through a concept known as cascade . Install faster and use less equipment with new SolarEdge Home Hub Inverters and embedded PCS. PCS is a high power density power conversion system for utility-scale battery energy storage systems (up to 1500 VDC). It is optimized for BESS integration into complex electrical grids and is based on our best-in-class liquid cooled power conversion platform, enabling greater scalability and. Acting as a “bridge” that switches electrical energy between direct current (DC) and alternating current (AC), PCS enable efficient charging and discharging of batteries for a wide variety of applications.
