

# Can't solar energy store water

## Overview

---

Yes, solar energy does require some water, but the amount is minimal compared to fossil fuels. High Water Consumption: Fossil fuel energy generation can consume thousands of times more water than solar energy, underscoring the inefficiency of these operations. Methods include: Batteries: These include lithium-ion batteries, a common choice for residential and commercial. This heated medium is stored in an insulated tank until the energy is needed, usually to boil water for energy generation.
