## Overview

---

Ever wondered why nuclear plants don't need giant battery farms like solar or wind?

Here's the kicker - nuclear reactors are like marathon runners, not sprinters. Combining nuclear and solar PV offers a wealth of economic opportunities for new revenue streams to be derived from expansive nuclear sites. Solar energy comes from converting sunlight into electricity using photovoltaic (PV) panels or using solar thermal technologies. For a generation that grew up in the digital age, savvy about technology and concerned about. It provides carbon-free, around-the-clock power to fill the gaps when the sun isn't shining or the wind isn't blowing. While nuclear energy operates at the utility scale, powering entire regions, solar energy offers something nuclear cannot—the ability for individual homeowners to take control of their energy.
