

Doha water storage

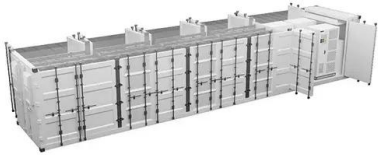

Overview

Doha is securing its future through a three-pronged strategy: expanding advanced desalination capacity, maintaining a world-leading Strategic Mega Reservoirs network, and implementing Water Law No. These initiatives, managed by Kahramaa, centralize governance to protect groundwater. Desalination plants are Qatar's main source of freshwater, but there is a limited supply of water stored in the system, and it's quite scary to imagine what would happen if a natural or man-made disaster were to impact this water source. Qatar envisions employing regional aquifers to store water via forced injection of desalinated water and thus increase available from a. This dataset records total water storage volumes in the State of Qatar, expressed in multiple units including imperial gallons (IG), cubic meters (M^3), million cubic meters (MM^3), and million imperial gallons (MIG).
