Instead of fading into obsolescence when they retire from propelling zero-emission Nissan Leafs, these battery packs now work together to store California solar power and discharge it in the evening when the grid needs it most. The commission unanimously approved an agreement between Georgia Power and PSC Staff — released an hour before hearing testimony from the public and advocacy groups —. Electric vehicles are essential to the global energy transition, but new research reveals that refining minerals like nickel and cobalt for EV batteries could create significant pollution hotspots. The study, focused on China and India, found that domesticating EV supply chains could raise sulfur. Freeman Hall, president of B2U, in front of stacks of used Nissan Leaf batteries.
