

Energy accumulator shut-off level

Overview

if you have an accumulator inside your "main" power network, it will act as a "fuel tank" for how much power is inside that power network. That's where the energy accumulator shut-off level becomes the unsung hero - the bouncer that decides when your battery should stop working to avoid a catastrophic meltdown (literally). Thanks! FACTORIO TUTORIAL: EMERGENCY POWER SR LATCH on youtube Thanks, but I still have the same. - I use this circuit to shut down factories - in order - as the power levels drop. NOTE: This unique control maximizes the usable capacity of new vessels and can increase the usable capacity of existing vessels.
