

Foreign guys use coal to store energy

Overview

This article examines how five innovative technologies can transform abandoned or in-use coal mines into sustainable energy centres. Both global coal consumption and production reached record highs in 2024, fueled mainly by the Asia-Pacific region continuing to add coal capacity to its generating fleet. Using a dataset of 2108 coal-fired power plants, this study explores the effects of foreign investment on Asia's coal. To understand why, developed countries must take a look at the political and market challenges facing the developing world. Coal, the most polluting fossil fuel, supplied 36% of electricity generation in 2022.

Foreign guys use coal to store energy

Q& A: Stanford expert explains why we continue burning coal for energy

But, without realistic energy alternatives, many countries will likely rely on coal for years to come, says Mark Thurber, associate director of Stanford University's Program on Energy & ...
