

High voltage ring main unit solar container

Overview

A Photovoltaic High-Voltage Ring Main Unit is: A compact, sealed, and insulated medium-voltage (typically 11kV–36kV) switchgear unit used in solar farms to connect multiple PV inverter outputs, ensure safe power flow, and provide protection and switching in a ring network. It plays a crucial role in the collection, protection, and distribution of electrical power generated by PV inverters before it is. Ring Main Units are compact modules that are gas-insulated and sealed, comprising main switching devices and ancillary components to ensure continuous secondary power distribution. Improve safety, reliability, connectivity and efficiency with EcoStruxure™ Grid, our active energy. In terms of safety, due to the variable and unpredictable power output from solar sources, we're well-equipped to address voltage stability and regulation, issues.
