

# **How to add forklift solar container fluid**

## Overview

---

Identify the type of energy storage fluid required for your specific forklift model, 2. Improper water levels can lower battery life and reduce the cycle time between charges, decreasing your forklift's effectiveness while increasing energy and maintenance costs. With proper maintenance, a forklift battery should last 1,500 cycles (or about five years). How often do forklift batteries need topping up with water?

How often you need to add water to forklift batteries depends on the battery type, size, how it's used, and the environment. This can be accomplished for less than \$20 per cell, plus (1) \$55 indicator module (installed). Whether you're investing in new hardware or implementing watering as one aspect of a more overarching power-as-a-service offering, an upgrade to your forklift battery watering system can quietly revolutionize the production you get from your forklift fleet.
