

# Hydraulic station accumulator maintenance

## Overview

---

Hydraulic accumulators should typically be serviced every 12 months under normal operating conditions, though this interval may need adjustment based on usage intensity, operating environment, and manufacturer recommendations. Proper maintenance of hydraulic accumulators is essential for ensuring optimal performance, extending equipment life, and preventing costly downtime. Regular inspection and servicing help identify potential issues before they become serious problems. Prior to any maintenance being done, relieve all nitrogen precharge pressure and hydraulic pressure as instructed in this manual. These include energy storage and reserve, leakage and thermal compensation, shock absorption and energy recovery.
