

Investment unit price of the dutch energy valley solar container project

Overview

A 40-foot solar container with lithium batteries costs €65,000-€110,000 in 2025. 45/kWh in 2024 and Dutch tax credits covering 35% of installation costs, these plug-and-play systems deliver ROI in 4-6 years. The cost of capital for solar PV projects represent responses for a 100 megawatt (MW) project and for utility-scale batteries a 40 MW project. A profile/imbalance factor of 0,85 indicates that the capture price of that technology has been estimated to be 85% of the average (baseload) EPEX price of that calendar year. However, prices aren't always simple—they vary depending on size, materials, certifications, and location.
