

# Is commercial solar container safe

## Overview

---

As one guide warns, “install GFCIs to ensure your system can handle the power needs” safely – critical if the container is in a damp environment. Professional installation: Always have a qualified electrician connect the main power. Shipping containers are often used as remote offices, workshops or data shelters on construction sites, farms, and emergency zones. When the grid is hundreds of feet away (or non-existent), a self-contained power solution is ideal. A major change is coming for commercial solar projects — and it could determine whether your company qualifies for the federal 30% Investment Tax Credit (ITC) for solar or loses it entirely. Starting January 1, 2026, new Foreign Entity of Concern (FEOC) rules take effect. However, with new rules taking effect over the next two years, timing has become just as important as design or location. Close coordination with your tax advisor, solar contractor, and equipment suppliers is necessary, especially in light of new “continuous construction” definitions expected from the IRS in August 2025.
