

# Is it feasible to store electricity at night and use it during the day

## Overview

---

One effective strategy is to utilize off-peak electricity and store it in battery storage units for use during peak hours. This approach can significantly lower energy costs and enhance energy efficiency. Peak demand times are usually after work, between 4 - 7 pm when everyone's cooking dinner or watching the TV. Storing solar power for overnight use or during cloudy days is a major consideration for anyone relying on off-grid energy.
