Overview

Quick Answer: Most lithium-ion solar batteries last 10-15 years with proper care, while lead-acid batteries typically last 3-7 years. Temperature is the ultimate battery killer: For every 8°C (14°F) increase above 25°C, battery life can be reduced by up to 50%. A lead acid battery is a kind of rechargeable battery that stores electrical energy by using chemical reactions between lead, water, and sulfuric acid. The table below illustrates their longevity: MEOX Mobile Solar Containers utilize solar LiFePO₄.
