

# Lead-based solar container ceramic capacitors

## Overview

---

First, it reviews the structure and energy storage principle of ceramic capacitors. Particularly, ceramic-based dielectric materials have received significant attention for energy storage capacitor applications due to their outstanding properties of high power density, fast charge-discharge capabilities, and excellent temperature stability relative to batteries, electrochemical. The key figure of merit, energy density ( $W_{rec}$ ), for high-field applications has dramatically increased year-on-year from 2020 to 2024, as evidenced by over 250 papers, demonstrating ever larger  $W_{rec}$  values.
