

Light storage charging

Overview

In the evolving landscape of energy solutions, integrated light storage and charging systems represent a significant breakthrough in microgrid technology. In a quest to make finding a charger easier for electric vehicle drivers, the city of Los Angeles is taking a novel approach: installing EV chargers on light poles on city streets, because the electric infrastructure is already there. The application scenario of light-storage-charge by Huijue Group is a typical application of energy storage in microgrids. It consists of three core components - photovoltaic power generation, energy storage batteries, and charging piles.
