

# Lithium battery solar container system explanation

## Overview

---

A lithium battery solar storage system is an energy storage system that can be used when there is insufficient or no sunlight. It consists of a lithium-ion battery pack, an inverter, a charge controller, and a monitoring system. If your solar container was powering medical refrigerators at a remote health clinic, could you count on your battery to hold strong during four days of consecutive cloud cover?

The battery you choose determines how long your system will survive, how much energy it will be able to store, and how. Lithium batteries are CATL brand, whose LFP chemistry packs 1 MWh of energy into a battery volume of 2. Containerized Battery Energy Storage Systems (BESS) are essentially large batteries housed within storage containers.
