

New commercial park solar container business

Overview

Recom Technologies, a European PV module manufacturer, has partnered with Solar Optimum to supply solar panels for a solar carport project at the Six Flags amusement park in California. At the edge of California's Mojave Desert, one of the most ambitious energy infrastructure projects in the country is proving that business logic — not policy theater — drives results, backed by \$2 billion in private capital and a clear focus on strengthening America's energy backbone. We model your load profile, design to structural and electrical realities, optimize incentives, and manage Rule 21 interconnection through permission-to-operate. Customize our all-in-one system to suit your facility - with or without solar - and lower your energy bills from day one. Your system will include battery modules, bi-directional inverters, a thermal management system and controls. Revel stands out from the competition by paying attention to what makes good business sense to each.
