Overview

Lithium-ion batteries degrade 30% faster in cold climates, which brings us to Oslo's unique solution. Developed through a collaboration with Arctic University researchers, this system uses phase-change materials that could potentially extend battery life by 40%. Our current projects include several large-scale solar developments, battery energy storage systems co-located with our existing power stations, and expansion of the Shoalhaven pumped. But here's the kicker: Norway's capital is quietly becoming a global poster child for energy storage innovation.
