

Periodic inspection of solar container capacitors

Overview

Main items of capacitor daily inspection (1) Monitor the working voltage, current and temperature, (2) Monitor whether the casing is inflated and leaks oil, and whether the auxiliary equipment is in good condition. The LumiSolarMobile system is a multi-purpose electroluminescence inspection system for solar cells and solar modules. Micro-cracks, cell failures, inhomogeneities, and other defects which are extremely difficult to detect visually can be detected clearly using LumiSolarMobile.
