

Phase change technology solar container room electric heater

Overview

An integrated solar heating system with a new type of phase change material (PCM), solar collectors and test building were developed. The exothermal and endothermal behaviors of the PCM were determined, and the stability and comfort of the solar heating system were. This article designs a high-altitude border guard post that can fully utilize the heat absorbed by solar collectors to continuously store thermal energy during the day and stably release heat at night. By 2025, this technology is projected to reduce solar heating costs by up to 40% in residential applications [3] [9].
