

Principle of cgn solar container power station

Overview

At its core, the solar energy container operates by converting sunlight into electricity using photovoltaic (PV) panels mounted on the roof or deployed nearby. As an enterprise participating in emission, a heat storage island, and a power island. By integrating all necessary equipment within a transportable structure, these units provide modular, plug-and-play renewable energy systems. These modular systems are rewriting the playbook for how businesses and communities access.
