

# Principle of gas chamber for solar container electrical equipment

## Overview

---

A solar gas turbine (SGT) typically consists of a solar field (including a concentrator and a receiver), a compressor, a combustion chamber (combustor), a turbine, and a generator (see Fig. This project was funded by the United States Department of Energy, National Energy Technology Laboratory, in part, through a site support contract. The Solarcontainer is a photovoltaic power plant that was specially developed as a mobile power generator with collapsible PV modules as a mobile solar system, a grid-independent solution represents. By integrating all necessary equipment within a transportable structure, these units provide modular, plug-and-play renewable energy systems. A solar water heater tank is a familiar solar energy container that can be seen on the roofs of many homes.
