

Shared solar container project list query

Overview

Once a project or entity has been shared with an org, it will become available in that org's normal CRUD endpoints (although for entities they will always be read only). When using fieldset=list, it is possible to query/filter on the owner, or who an entity has been. Without the page and per_page parameters, the first 100 shared projects will be returned. There are over 1,350 major energy storage projects currently in the database, representing more than 108,000 MWh of capacity. This database represents a list of community solar projects, as well as the low-income (LI) and low- and moderate-income (LMI) provisions for both complete and pending projects identified through various sources. Battery systems have emerged as the best opportunity and optimal solution for energy.

Shared solar container project list query

Azure Resource Graph sample queries for Azure Resource Manager

List all tags and their values This query lists tags on management groups, subscriptions, and resources along with their values. The query first limits to resources where tags is not empty(), ...
