

Shared space in solar container building

Overview

It consists of four 40-foot steel converted shipping containers that are placed in the shape of an 'X,' converging in the middle. Built from repurposed shipping containers, this modular housing solution integrates renewable solar energy systems and adaptable layouts, providing efficient and sustainable living spaces for urban communities. Wilmot Modular's newest line of mobile storage and office buildings is set to expand the reach of modular buildings into remote locations. Each container can sleep up to 20 people in private 5-by-8-foot rooms (with one resident per room), and they all offer central air conditioning powered by solar energy.
