

# Solar container chain

## Overview

---

From portable units to large-scale structures, these self-contained systems offer customizable solutions for generating and storing solar power. That is why we have developed a mobile photovoltaic system with the aim of achieving maximum use of solar. The container is equipped with foldable high-efficiency solar panels, holding 168–336 panels that deliver 50–168 kWp of power. It is the perfect alternative to unstable grid power and diesel generators, keeping operations running even in remote areas or where infrastructure is weak. Below is a narrative description of how a solar-powered shipping container is revolutionising the face of access to global energy, off-grid energy, grid backup, and clean development for applications ranging from European building sites to African communities and the rest of the globe.
