

Solar container in low voltage distribution cabinet

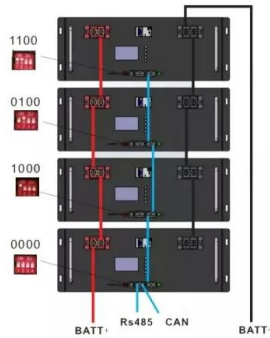

Overview

The core function of this cabinet is to safely, reliably, and efficiently interface the DC power generated by the PV system (after inversion by the inverter) with the 400V low-voltage grid, ensuring the process is safe for both the grid and the equipment itself. What is a GGD AC low-voltage distribution cabinet?

For low-voltage solar power stations that are connected to the grid, the PV grid connected cabinet can also incorporate additional devices for functions like measurement and protection. We employ Schweitzer Relays for remote monitoring, enabling real-time detection of the operational status of low voltage cabinets, transformers, and ring network cabinets. In terms of safety, due to the variable and unpredictable power output from solar sources, we're well-equipped to address voltage stability and regulation, issues.
