

Solar container switch solar container button does not respond

Overview

Check the wire connections and make sure none of the devices you are loading is defective. The non-responsiveness of the solar button can often stem from several issues, such as insufficient sunlight, failure in the battery or circuitry, and weather-related factors. The manual states that you can push this button and it will beep and let you know its on, but I do not hear a beep. If your solar charge controller display is not working, it is possible that the unit is not receiving power, or some internal components could be damaged.
