

# **Solar container through hydrogen production**

## Overview

---

This review explores the advancements in solar technologies, encompassing production methods, storage systems, and their integration with renewable energy solutions. It examines the primary hydrogen production approaches, including thermochemical, photochemical, and biological methods. In a new study, researchers from Chalmers University of Technology and Uppsala University, among others, present. Designed for modular deployment and powered by renewable solar energy, SHEP™ enables industries, governments, and mobility partners to establish zero-emission fueling infrastructure anywhere.
