

Subsidies for new solar container projects

Overview

Although the federal 30 % solar tax credit for customer-owned systems expired at the end of 2022, there are still ways for homeowners to capture significant savings through state rebates, tax incentives, and net metering programs —especially if you design and procure your system. Income-Qualified Focus Creates Broader Access: Most major grant programs target households at or below 80% of Area Median Income, expanding eligibility beyond traditional low-income thresholds to include middle-class families who previously couldn't access solar grants. The Solar Energy Technologies Office (SETO) does not provide financial assistance to companies or individuals to install solar systems. With the federal solar tax credit ending much sooner than expected — you now only have until Dec. 31, 2025, to install a system and get the 30% solar tax credit — it's definitely in your best interest to take advantage of all the solar incentives available to you. Financial incentives like solar grants, subsidies, and rebates are powerful tools that bridge this gap. These programs make switching to solar a practical and financially sound decision for homeowners, businesses, and communities.

Subsidies for new solar container projects
