

Superconducting solar container engineering case study

Overview

This article presents a comprehensive study on the design, fabrication, and Based on the technical characteristics of space solar power plants, the development and key technologies of high-temperature superconducting technology are summarized, and suggestions. In December 2021, the 35-kV kilometer-level high-temperature superconducting (HTS) demonstration cable was officially connected to the grid in Xuhui District, Shanghai, China. What is a superconducting electromagnet?
