

Swedish physical all-vanadium solar container application direction

Overview

Here, we show that a MoS₂-decorated TiO₂ (MoS₂@TiO₂) photoelectrode can successfully harvest light to be stored in a solar redox flow battery using vanadium ions as redox active species in both the catholyte and anolyte, and without the use of any bias. This is just one of many possible application scenarios for our mobile solar containers. Do you have something else in mind for the Containerphotovoltaik?

Whether you want to use solar energy to power your home, business, or something else entirely, our containers are the perfect solution. ideal for stabilizing i , a hydrogen generation facility, and a heat and power plant. Our pioneering and environmentally friendly solar systems: Folded solar panels in a container frame with corresponding standard dimensions, easy to unfold thanks to a sophisticated rail system and no shading from a remaining container structure.
