

# The service life of the electric solar container wrench

12.8V6Ah

Nominal voltage (V):12.8  
 Nominal capacity (ah):6  
 Rated energy (WH):76.8  
 Maximum charging voltage (V):14.6  
 Maximum charging current (a):6  
 Floating charge voltage (V):13.6~13.8  
 Maximum continuous discharge current (a):10  
 Maximum peak discharge current @10 seconds (a):20  
 Maximum load power (W):100  
 Discharge cut-off voltage (V):10.8  
 Charging temperature (°C):0~+50  
 Discharge temperature (°C): -20~+60  
 Working humidity: <95% R.H (non condensing)  
 Number of cycles (25 °C, 0.5c, 100%dod): >2000  
 Cell combination mode: 32700-4s1p  
 Terminal specification: T2 (6.3mm)  
 Protection grade: IP65  
 Overall dimension (mm):90\*70\*107mm  
 Reference weight (kg):0.7  
 Certification: un38.3/msds

## Overview

---

This lesson discusses how to determine the average service life – also referred to as economic life – of equipment and fixtures. Determination of an average service life is a necessary first step to selection of a percent good factor, required in order to calculate the reproduction/replacement cost. Solar batteries don't last as long as solar panels because they degrade more quickly. A solar panel's main components - aluminium, glass, plastic, and silicon - will all outlast the panel itself, and can be recycled once it's dismantled. Enhance battery lifespan and performance with comprehensive guidelines and smart tools. Because while solar systems are famously low-maintenance, they're not 100% maintenance-free. If the water level is full and it's in direct sun in the middle of the day an roken panels could be why your solar panels aren't working.
