

# Tower crane solar container model design scheme

## Overview

---

This report presents the steps taken by the author to develop a new concept model that is aimed at solving the lengthy process via a 3-stage methodology that includes the understanding the traditional modelling methods as well as the utilization of a product family modular-based. For the purpose of monitoring the time running state and eliminating the overloaded security issues of the tower crane, this paper proposes a way to implement a tower crane robot that consists of a load monitoring system using a load sensor, the objective of the system was to read weight carried by. The strategic positioning of a tower crane enables optimal sun exposure for solar panels, maximizing energy capture. This system helps move heavy loads from outside the truck to inside and also within the truck. In a bid to develop a crane simulator programme to aid the planning operations, NTU has embarked on a system development for many months and it has proved successful in the mobile crane section. One of the key obstacles the author had to overcome is the lengthy design phase whereby realistic and.
