

# Water source heat pump solar container

48V 100Ah

## Overview

---

The hybrid solar PVT-source heat pump is a water-to-water heat pump installed inside the building. These systems use the sun's energy to heat water, reducing your reliance on fossil fuels and lowering your utility bills. RPS supplies the shipping container, solar, inverter, GEL or LiFePo battery bank, panel mounting, fully framed windows, insulation, door, exterior + interior paint, flooring, overhead lighting, mini-split + more customizations! RPS can customize the Barebones and Move-In Ready options to any design. That's why it's essential to carefully assess the benefits, limitations, and return on investment (ROI) of each. One promising solution is the integration of solar thermal systems with heat pumps. In places that come up short on sunshine (most northern states), the energy-efficient heat pump water heater reduces electricity use by 50 to 70% a year (compared to conventional models that convert electricity to heat).
