

What does 50 megawatts of solar container capacity mean

Overview

This measurement represents the maximum power output that a solar photovoltaic (PV) system can generate under optimal conditions. In the context of a Battery Energy Storage System (BESS), MW (megawatts) and MWh (megawatt-hours) are two crucial specifications that describe different aspects of the system's performance. Understanding the difference between these two units is key to comprehending the capabilities and limitations. Over the last 10 years, the solar industry has gone from installing 6 GWdc in 2014 to nearly 50 GWdc in 2024. A megawatt is 1,000,000 watts of power — a thousand times larger than a kilowatt. Those characteristics will determine compatibility of the storage with a proposed application and will also have impact on its economic feasibility.
