

# What equipment does the substation solar container device have

## Overview

---

The PV containerized substation is a pre-Prefabricated booster substation integrating a low-voltage switchgear system, a high-voltage switchgear system, transformers, and auxiliary equipment. Additionally, our system supports remote control of the entire circuit breaker within low voltage cabinets and ring network. Smaller distribution substations are subdivided into container-sized modules, which can be manufactured, assembled and tested at the factory, allowing easy transport and fast installation and commissioning at site. The pre-fabricated building shelters the equipment from environmental influences. By integrating the equipment in a modular housing and undertaking rigorous testing off site, Siemens is able to supply fully built and tested modular traction power substations to a consistent and high level of quality. This innovative solution is suitable for a wide range of applications, including industrial facilities, construction sites, remote areas, and.
