

## Overview

---

The largest PSH is the Bath County facility in Virginia, which has six separate generators, each with 477 MW nameplate power capacity for a combined total of about 2,860 MW of nameplate power capacity that can discharge at full capacity for up to six hours or longer. Powerwall 3 achieves this by supporting up to 20 kW DC of solar and providing up to 11. It has the ability to start heavy loads rated up to 185 LRA, meaning a single unit can support the power needs of most homes. Grid energy storage is vital for preventing blackouts, managing peak demand times and incorporating more renewable energy sources like wind and solar into the grid. Storage technologies include pumped hydroelectric stations, compressed air energy storage and batteries, each offering different.

## What is the maximum power storage power supply
