

What is the most important work content of solar container after-sales

Overview

System Performance and Reliability: Regular maintenance and monitoring offered through after-sale services are essential for maximizing the performance and reliability of solar systems. Under the EPC model, a single contractor handles every aspect of the project, from initial site assessment and system design to procurement of materials and equipment, as well as the final installation and commissioning of the solar power system. Prompt responses to inquiries, efficient troubleshooting, and timely maintenance contribute significantly. By integrating all necessary equipment within a transportable structure, these units provide modular, plug-and-play renewable energy systems.
